

IMS Fabtrack's application for sourcing and tracking construction equipment rentals provides online viewing and reporting to monitor rental durations. Construction activities are linked to rental equipment to provide notification of when rental items are to be returned. Receipts of rental items are logged and issue tickets can be prepared to identify where rental items are located. Service requirements can be monitored to ensure that required service milestones are met during the time rental items are on hand.

Standard Features

- Catalogue of rental items
- Supplier/vendor catalogue
- Create rental equipment requisitions and link to purchase order/contracts
- Create receiving documents as items are received
- Issue documents for issue from warehouse to contractors
- Return to supplier/vendor when rental duration is completed
- Tracking of spare parts and service requirements
- Email of requisition and purchase order/contracts to suppliers
- Reporting to determine look ahead of items due to be returned off rent
- Inventory of items on rent and location and issue details

Calgary, Alberta, Canada
