

Fabtrack simplifies QC data management, allowing quality control personnel to better maintain integrity of spool fabrication. The weld mapping is populated via electronic download of data from Spool Gen and Acorn Piping applications. Users can assign approved weld procedures and qualified welders to welds as well as monitor spool fabrication status, MTR and heat number data, welders qualifications, percentage and repair rates and Paint/PWHT contract requirements. Turnover packages are constructed during fabrication, allowing final turnover documentation to be generated in minutes. These documents can then be printed, emailed or exported for storage on a CD.

Standard Features

- PDF versions of MTRs are linked to spool data and can be viewed any time
- Heat numbers are assigned to material and cannot be reissued once that material is consumed
- Report NDE percentages (current, status, required)
- Construct and manage NCRs and RFIs
- Weld mapping with link to welder and MTR files
- Reporting for job and project close out
- E-mail or print QC data instantly
- Weld procedure PDF files
- Link of engineering LDT tables to NDE requirements
- Welder maintenance for tracking qualifications

Calgary, Alberta, Canada
